Importance of the ORI When Making a CQR Inquiry

Every LEADS CDC has an ORI associated with it. If an agency has multiple CDCs, there will also be multiple ORIs.

With that in mind, when making a CQR inquiry (FBI/III rap sheet) if the operator would like the response returned to his terminal, the ORI that is associated with the CDC installed on the computer being used to make the inquiry must be included in the Requesting ORI field of the CQR format. This is to ensure proper delivery of the response. If a different ORI is included in the requesting ORI field, the response will be sent to the terminal associated with that ORI.

For example, let's say Anytown PD has two CDCs: ABC (IL0329800) and XYZ (IL03298A1). Operator Jones is using CDC/XYZ to make a CQR inquiry and in the requesting ORI field of the CQR format he enters IL0329800, which is the ORI associated with CDC/ABC not the one associated with his terminal's CDC/XYZ. This will cause the CQR response to be sent to CDC/ABC and not to his terminal (CDC/XYZ). If Opr. Jones wants to receive the response at his terminal (CDC/XYZ), he must include the ORI associated with CDC/XYZ, which is IL03298A1.

Only CQR response routing is affected by this. Responses to other CHRI inquiries (CQH, CQR1, etc.) will be routed to the inquiring terminal regardless of what ORI is entered in the Requesting ORI field of the inquiry format.

If you are not sure of a CDC's associated ORI, contact your agency's LEADS Agency Coordinator (LAC).

Please contact the Help Desk (866/LEADS-00) with questions or assistance.
