### LEADS 3.0 Common Login Errors

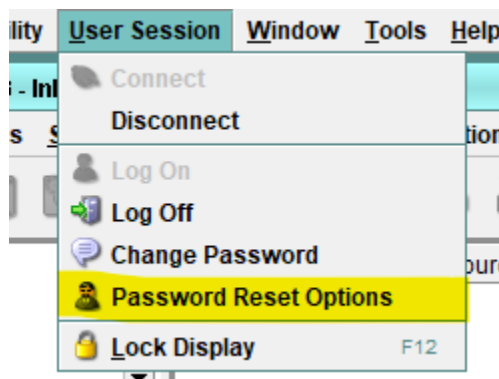

When logging into LEADS 3.0 users may receive a message that notifies the User of a specific issue before successfully logging in. Below are the most common “Logon Failed” errors and explanations of those error messages:

**Account Not Authorized From This Station:** This error is stating the user is logging into a station which is not in the user’s profile under their current ORI. This will need to be addressed by LEADS staff. Please contact your LAC or LEADS Delegates. The agency’s LAC/Delegates should contact the ISP Help Desk for this issue.

**Password Mismatch:** This error means the password entered is not correct. Make sure the user does not have the CAP Lock button on while entering their current password, and upper and lower case are properly used. *Users are advised to update the “Challenge Questions” on their User ID profile in order to reset/recover their own passwords.*

If this is still an issue, contact your LAC or LEADS Delegates for a password reset.
