NARRATIVE STATEMENT:

(Provide a detailed summary of system operations for a modified 9-1-1 plan. Also, if incorporating an NG9-1-1 solution, please include the additional items listed below pursuant to 1325.205 b)12).

- 1) Indicate the name of the certified 9-1-1 system provider being utilized.
- 2) Explain the national standards, protocols and/or operating measures that will be followed.
- 3) Explain what measures have been taken to create a robust, reliable and diverse/redundant network and whether other 9-1-1 Authorities will be sharing the equipment.
- 4) Explain how the existing 9-1-1 traditional legacy wireline, wireless and VoIP network, along with the databases, will interface and/or be transitioned into the NG9-1-1 system.
- 5) Explain how split exchanges will be handled.
- 6) Explain how the databases will be maintained and how address errors will be corrected and updated on a continuing basis.
- 7) Explain who will be responsible for updating and maintaining the data, at a minimum on a daily basis Monday through Friday.
- 8) Explain what security measures will be placed on the IP 9-1-1 network and equipment to safeguard it from malicious attacks or threats to the system operation and what level of confidentiality will be placed on the system in order to keep unauthorized individuals from accessing it.

Plan Narrative:

The Washington County Emergency Telephone System Board is requesting to change its 9-1-1 System Service Provider (9-1-1 SSP) from Frontier Communications to INdigital telecom. The system will be provisioned as an IP based NG911 System. The Washington County ETSB is upgrading their failing 9-1-1 call taking equipment to a geo-diverse Solacom system that is capable of receiving 9-1-1 calls using IP. Side A of the controller will be located at the Washington County Sheriff's office. Side B of the controller will be located at the Randolph County Sheriff's office.

The Washington and Randolph County NG911 equipment will comply with all State and Federal requirements and be compliant with the National Emergency Number Association standards.

The network will be provisioned as an IP based, Next Generation network and will deliver calls using IP technology to the Washington County PSAP. Access is password protected. The Enhanced 9-1-1 network is private with no outside access. There will be redundant Legacy Network Gateways (LNG's) and Internet Protocol Selective Routers (IPSR's). One set is located in Mattoon, IL and the other is located in Rosiclare, IL. Carriers can deliver 9-1-1 calls to the IPSR's or LNG's by using SS7 signaling or by using SIP trunk, IP based signaling. Please see the attached network diagram.

Router to router trunks will be established between INdigital's IPSR's and selective routers owned by other 9-1-1 SSP's for routing of split exchanges where necessary.

INdigital will administer the 9-1-1 database and MSAG for Washington County subscribers. INdigital will request TN loads and updates from the carriers prior to the cutover and assume all 9-1-1 SSP administrative responsibilities for the database at the time of conversion. INdigital will work with the carriers and Washington County to keep the database up to date and in compliance with Illinois state law, on an ongoing basis.

INdigital will coordinate the ordering and installation of trunks to the two new LNG's or IPSR's. INdigital will work with the carriers that are currently connected to the Frontier selective router for delivery of wireline and wireless 9-1-1 calls to Washington County. Traffic will be migrated over, carrier by carrier, to the new LNGs or IPSRs. The target completion date for the migration is November 20, 2019.

INdigital will mirror current call transfer conditions at the time of conversion and will implement 9-1-1 call transfer with ANI between neighboring counties of Washington County, where possible, post conversion. Test calls will be made for each carrier either prior to or during the cutover to ensure calls are routing correctly and that the proper ANI is being displayed at the PSAP.

FIVE YEAR STRATEGIC PLAN FOR MODIFIED PLAN

(Provide a detailed summary of the proposed system's operation, including but not limited to, a five-year strategic plan for implementation of the modified 9-1-1 plan with financial projections)

Narrative:

Current Plan:

Implement a Next Generation 911 hosted solution in conjunction with Randolph County provided through Indigital currently funded by the ETSB's reserve funds and grant funding through the Illinois State Police 911 Administrator. The state of our call taking equipment and network requires immediate attention. We will be changing our service provider from Frontier Communications to Indigital. The upgrade in call taking equipment, with a Solacom solution, will establish an interface with non emergency administrative lines as well as the radio console. There will also be an interface with our Lawman CAD system. A mobile position (MEVO) will be online for redundancy in case of a natural disaster or unforeseen issues at the PSAP. This can be moved to a location with radio dispatch capabilities and dedicated generator, such as our Emergency Management Mobile Command Unit.

Future Plans:

Implement a new CAD system with integrated map to streamline call intake process and procedures for the telecommunicators. This also requires the changing of map vendors.

Relocate the PSAP to a different location, contingent upon the building of a new county building. This would also require the installation of new furniture for the workstations which would allow for more screens and larger work area.

PARTICIPATING AGENCIES

Provide a list of public safety agencies (Police, Fire, EMS etc.) that are to be dispatched by the 9-1-1 System. Each Agencies land area(s) in square miles and estimated population which will have access to the proposed 9-1-1 System. Do not forget to include County Sheriff's jurisdiction and Illinois State Police Districts. Each agency that appears on this list should also have signed a call handling agreement.

TEST PLAN DESCRIPTION

1) Description of test plan (back-up, overflow, failure, database).

1. Place a test call on existing trunks to establish a working baseline.
2. Migrate 911 traffic to the new ISUP trunks.
3. Place a test call on new ISUP trunks. Let the dispatcher know that there is no emergency and a test call is being conducted. Ensure that the correct PSAP is reached. Request the dispatcher confirm the ANI and ALI information.
4. Switch engineer will then block the last trunk used to deliver a call.
5. Repeat step 3.
6. Continue to block trunks and make test calls, until all trunks have been tested.
7. Block the final trunk to test alternate final routing.
8. Unblock all trunks and make one final test call to ensure that configurations are in the final and good operating state.

2) List wireline exchanges to be tested.

1) **INdigital Next Gen Core Services**

- **Database Services**

Location Database services for the PSAP. Repository for ALI. Legacy wireline records in the (Washington County, IL) service area will be processed by INdigital using industry standard record exchange and correction methods. i2 format ALI service (wireless, VoIP - using pANI) will be provided by INdigital.

- **Routing Services –**

INdigital will design and deploy an NGCS configuration that conforms to standards and includes the necessary components to provide NG9-1-1 using industry standard Functional Elements. Redundant, diverse service aggregation points of presence will be established, and the proposed solution will conform to the current standards and accommodate future adjustments to the standards as they become available.

- **Network Services –**

The proposal's objective is to establish an ESiNet (Emergency Services iP Network) to serve existing and new customers in Illinois. This connectivity will be provided by diverse carriers when available. This service enables connectivity to the PSAP for delivery of voice and data for NG9-1-1.

2) **INdigital MEVO Core Backup Services**

- **Annual INdigital MEVO Core Backup Phone Service for two (2) MEVO Core backup phones one (1) at each of the two (2) Washington County PSAP's**

A service continuity and disaster recovery platform (INdigital's MEVO system) will be deployed at the two 911 centers. The MEVO platform is an independent call processing system on the output (egress) side of the NGCS Routing Platform. This platform allows for 9-1-1 calls to be routed to a VOIP phone with E9-1-1 functionality.

3) **INdigital Text Control (TCC) Services**

- **Text Services –**

INdigital Text to 9-1-1 services is a text control services that enables SMS text to and from the 9-1-1 PSAP that subscribe to the service. The Customer will receive the SMS messages from the major carriers. This is an inbound service that can be enabled through a browser-based interface or directly integrated with the call handling application via MSRP. This service is considered best effort service and is not regulated.

INdigital/Washington County 9-1-1 - NGCS Overview

The Washington County ETSB has elected to purchase a "SHARED" geo-redundant Solacom Host/Hosted NG9-1-1 system with Randolph County ETSB with a total of eight (8) Solacom Guardian Answer Positions. There will be two (2) answering positions at the Washington County Sheriff's PSAP, two (2) answering positions at the Randolph County Sheriff's PSAP, two (2) hosted answering positions at the Washington County Ambulance and two (2) hosted answering positions at the Sparta Police Department. MedStar will operate a single MEVO IP station.

INdigital 9-1-1 IP call delivery and ALI database services will be provided, replacing current Frontier services. Once completed, IP call delivery trunks will be installed from Mattoon and Rosiclare IL INdigital NGCS Nodes to Washington and Randolph county prior to, or in parallel to the Solacom Host system turn-up. IP or Serial ALI data spills will be delivered to local CAD and MAP systems at each ECC.

One (1) MEVO IP Station will be deployed at each of the two (2) Washington County ECC's. The MEVO phones will have both local TIG and MEVO Core Server registrations upon project completion. Each phone will register to a TIG/MEVO server and/or the Host Solacom controllers located at each primary host site, as well as an ESInet MEVO Host registration to facilitate direct failover from the INdigital SIP:me IPSR to the ESInet based MEVO Server.

NGCS Call Delivery Network and Services

INdigital will coordinate the installation of IP 9-1-1 call delivery trunks, one (1) primary and one (1) backup IP circuits to Randolph County Sheriff and one (1) primary and one (1) secondary backup IP circuit to Washington County for the delivery of 9-1-1 calls to each PSAP.

NGCS Backup and Overflow Call Routing

Call routing within the ESInet based Functional and Network Elements (IPSR Resource list). Call flow within the IPSR will be determined during initial installation and will be governed by project management and post sales engineering.

NGCS Call flow / IP Network notes:

Each Guardian Host location will be connected to INdigital NGCS Cores at Mattoon and Rosiclare IL, via one (1) 10Mbps Primary IP links and one (1) backup link as illustrated in the [Network Design](#)

The primary 9-1-1 call delivery path will include carrier grade IP connections from the Mattoon IL INdigital Data Center to the Washington County (HOST A), router (A), located at the Washington County Sheriff.

The primary 9-1-1 call delivery path will include carrier grade IP connections from the Rosiclare IL INdigital Data Center to the Randolph County (HOST B) router (A), located at the Washington County Sheriff

Washington and Randolph Counties will interconnect via IP circuits between, router (A) to router (A), by means of a 50-100Mbps carrier grade IP circuit.

Each NG9-1-1 Solacom Host location (Washington and Randolph County), router (B), will terminate backup commodity internet-based IPsec VPN to the INdigital ESInet.

Washington Ambulance will have commodity internet-based IPsec VPNs terminated between Router (A) and the ESInet at each site.

Washington County will directly connect via a separate private carrier grade IP connection to Washington County Ambulance.

9-1-1 call delivery from the Solacom Geo-redundant call handling CPE hosts, to all attached Solacom Guardian answering positions will be completed by means of an INdigital managed "Regional" ESInet which provides IP based call delivery services to secondary PSAP's with Solacom hosted workstations and MEVO IP stations.
